jorge-hidalgo-portafolio.netlify.app

Full-Stack / Backend Software Engineer with 5+ years of experience designing, building, and hardening production systems for banking and fintech clients. Specialized in **Java & Spring Boot** backend services, **Angular micro-frontend** architectures, and cross-platform mobile development (Android/iOS). Track record of resolving critical production issues — JVM/Kubernetes memory instability, distributed session bugs, security vulnerabilities — on high-availability banking platforms. Upper-intermediate (B2) English, remote-ready, comfortable working directly with US/international teams.

EXPERIENCE

Senior Full-Stack Developer — Consultant

Aug 2022 – Present

Advance Consulting · Quito, Ecuador (Remote-capable) · Client engagements: St. George Bank (Cayman Islands) & Banca Empresas – Banco Guayaquil

- Led a Java 11/Spring Boot 2 → Java 21/Spring Boot 3 migration for a core banking microservice; diagnosed and eliminated recurring OOMKilled production pod crashes caused by JVM container-memory misdetection, restoring platform stability on OpenShift.
- Reduced Checkmarx SCA security findings from 147 (21 Critical, 60 High) to **zero Critical/High** on a core banking service, through dependency upgrades and targeted dependency-resolution fixes.
- Diagnosed and resolved a Spring Authorization Server session-persistence bug affecting production users across load-balanced pod replicas by identifying the missing Redis-backed session store.
- Built and maintain a 6-microfrontend Angular (Module Federation) monorepo powering a banking digital platform, including international transfer flows, beneficiary management, and notification systems.
- Delivered an in-app OTP authentication feature (Entrust SDK) end-to-end across Android, iOS, and backend — from technical estimation through implementation.
- Built native mobile features in Kotlin and Swift/Jetpack Compose; fixed platform-specific UI and logic bugs across Android 13–16.
- Integrated external banking APIs and reactive services (Spring WebFlux) for cross-bank international transfer processing.
- Partnered directly with OpenShift/Azure DevOps infrastructure teams on deployment pipelines, memory allocation, and CI/CD reliability.

Back-End Developer — Freelance

Jul 2022 – Aug 2022

UIO Soft+ · Quito, Ecuador

- Built a Node.js API for a lending platform: user registration, encrypted storage of personal/banking data, document upload for validation, and automated loan approval/rejection logic.

Full-Stack Developer

Jul 2021 – Jul 2022

AlphaCrew Studio LLC · McKinney, TX, USA (Remote)

- Developed REST APIs with Node.js and Flask; integrated Firebase (Firestore, Auth, Cloud Functions) into production applications.
- Built a Chrome extension for automated web scraping.
- Implemented real-time chat functionality with Node.js and Socket.io.

SKILLS

Backend	Java, Spring Boot, Spring Security, Spring WebFlux, Node.js, REST API Design
Frontend / Mobile	Angular (Module Federation), TypeScript, Kotlin (Jetpack Compose), Swift
Data & Infra	SQL, Redis, OpenShift, Kubernetes, Azure DevOps, CI/CD, Firebase
Security & Tools	Checkmarx SCA, Git, Jira

EDUCATION

Computer Science Engineer — Universidad UTE, Quito, Ecuador
